Middn Whitepaper

01

Introducing Middn App

Middn is a third party escrow protection service that uses smart contracts to provide an added layer of security and trust between buyers and sellers in online transactions. Our platform uses the Ethereum blockchain to create a secure and transparent escrow service that ensures that funds are held securely until the terms of the transaction are met.

With Middn, buyers can be confident that they will receive their goods or services as promised, while sellers can be sure that they will be paid as expected. This extra layer of security helps to prevent fraud and create a safer, more transparent ecosystem.

It works by providing a smart contract that secures a third party's escrow on a blockchain. The smart contract requires funds to be deposited into an escrow account and can only be released if the contract is fulfilled. This allows parties to use escrow to ensure that the terms of the contract will be met before funds are transferred. This allows the parties to negotiate a contract without having to file the escrow with a financial institution. Parties can rest assured that the terms of the contract will be met, and that they will be capable of knowing that the funds are secure and that the terms of the contract will be met.

02

Why Middn ?

Fully secure

Powered by blockchain technology. The transactions are recorded and stored on the blockchain, providing a secure and immutable record of all transactions.

Fast, no middlemen

The escrow process is automated and decentralized on the blockchain, so payments can be made quickly and securely without any intermediaries.

Non-custodial

Your keys, your tokens Middn is built using crypto-friendly tech and you're in full control of your wallet. We never take custody of your tokens — even in escrow.

03

The Market

The global P2P payment market was valued at USD 1.89 trillion in 2021 and is expected to hit around USD 9.67 trillion by 2030.

422% Growth compared to 2021

- The volume of peer to peer (P2P) payments from $1.89 Tn $9.67 Tn was transacted by the global payment market in 2021 to 2030. Technologies like blockchain, decentralized exchanges and smart contracts have been used to improve the security and transparency of these transactions.
- Over the next mile years, adoption of P2P payments is expected to continue to grow, with more people and businesses using these services. Advancements in blockchain and smart contracts may lead to more efficient and secure transactions, and decentralized exchanges and platforms will also be enhanced and provide customers with increased security and reliability.
- Finally, P2P payments could become even faster and more convenient with the rollout of 5G networks, which will allow for more data to be sent and received in real-time. This could further improve the process even further. Additionally, blockchain technology will also aid in providing higher levels of security and greater transparency.

04

Our Vison

Fraud Prevention

We committed to preventing fraudulent activity on the blockchain platform.

Totally transparent

We committed to providing an open and transparent blockchain platform.

Guarantee privacy

We committed to protecting user privacy. Your data is safeguarded from misuse.

Middn is a decentralized and web3 company that offers a high degree of privacy and transparency to its customers through the use of blockchain technologies. Blockchain technology allows Middn to maintain a transparent ledger and verify every transaction made. This means that users don't have to worry about their personal or financial information being leaked to unwanted third parties. In addition, Middn uses state-of-the-art encryption methods to protect its users' data.

07

Web2

Lebanoskin — Allow to sell products on personalized control and delivery

Etsy — Allow to sell products, Allow to receive in fiat, Allow to exchange

Craigslist — Allow to sell products, Allow to receive in fiat, Allow to exchange

Amazon — Allow to sell products, Allow to receive in fiat, Allow to exchange

Paypal — Allow to receive in fiat, Allow to exchange

Fiverr — Allow to sell Gig, Allow to receive in fiat, Allow to exchange

Web3

Fantom — Allow to sell products, decentralized and decentralized exchange

Metamask — Allow to exchange crypto, Allow to receive and provide

Ledger — Allow to exchange crypto, Allow to receive and provide

Rainbow — Allow to exchange crypto, Allow to receive and provide

Middn — Allow to sell products, Allow to receive and provide, Allow to exchange crypto, Allow to provide escrow service

Polygon — Allow to sell products, Allow to receive and provide, Allow to exchange crypto

Web3 is the future of the internet because it is built on a decentralized platform, meaning it is more secure and efficient than web2. It is also more user-friendly, providing users with more control, privacy, and autonomy over their data. Web3 also offers a more open and transparent technology that is better suited to the modern digital economy.

08

The Website

- **The app**

An ergonomic application designed to be user-friendly with a polished design and intuitive functions.

- **Features**

Real-time features to help you like Private Messaging, Notification, Statistics and many more.

09

The Product

- **The Escrow**

It helps to protect both parties involved in a transaction by ensuring that the funds are securely held until all obligations of the agreement are fulfilled.

- **The profile**

Creating a good reputation on middn helps to build trust with other users, which can lead to better networking opportunities.
